1. Remove set screw (A) and detach terminal assembly (B) from housing.
2. Route trailer wires through housing. Strip $\frac{1}{4}$ " and tightly secure wires to the terminal housing per diagram below.
3. Align the terminal assembly keyway with the housing keyway and insert it into the housing.
4. Tighten the set screw.
5. Tighten the strain relief screw (C).
6. Housing can rotate 180 degrees to provide LED function viewing per your desired location.
7. Attach trailer coupler to the hitch ball on the tow vehicle. Plug the completed harness into the tow vehicle and test all functions. The LED test light will activate each function ensuring correct electrical continuity.

NOTES:

Locate wires and pin location by function on tow vehicle or trailer. Color coding is not standard among manufacturers.

LED test lights will illuminate upon activation of each trailer function verifying correct electrical continuity.
